

vSpace Management Center

Key Feature & Benefits

- **Comprehensive:** a single management tool for either the Citrix HDX environment or the NComputing vSpace environment.
- **Centralized:** access an entire NComputing deployment from a single console.
- **Scalable:** manage 100, 1000 or 10,000 devices across multiple networks and locations
- **Simple:** easy to install and use with a flexible web-based user interface

Manage all NComputing Devices from a single console

- N-series for Citrix HDX

- L-series or M-series for NComputing vSpace

Enterprise-Class management for NComputing access devices.

For organizations deploying NComputing desktop access devices, vSpace Management Center provides a highly scalable, flexible and easy to use single point of client management. With its web-based console, IT administrators can manage their client devices from anywhere, anytime. vSpace Management Center helps organize a deployment whether it is a single site or multiple sites – and makes it easy to perform management tasks remotely including firmware updates, configuration changes, device resets and more. By allowing administrators to access and manage all client devices from a single location, regardless of the size or number of deployment sites, vSpace Management Center dramatically reduces the administrative overhead needed to maintain and control their environment.

FEATURES

SUPPORTED DEVICES	N-series for Citrix HDX L-series or M-series for vSpace (Available Q4 2012)
PROFILE-BASED CONFIGURATION	Assign devices to common profiles for scalable management of device settings
SINGLE OR GROUP MANAGEMENT	Push settings to manage an individual device (1:1) or use profiles for group management (1:many)
EASY FIRMWARE UPDATES	Use the firmware update wizard to simplify device updates and scheduling
SIMPLE STATUS	Central dashboard with logging and group views enables rapid assessment of your environment's status
CONSOLIDATED INSTALL	Install the complete vSpace Management Center via one installer in under 10 minutes
COMPREHENSIVE LOGGING	System events are continually logged to aid in troubleshooting and to confirm actions
DELEGATED ADMINISTRATION	Supports two levels of management for "view-only" and "edit-capable" access and can be easily configured via Active Directory/LDAP
REMOTE VIEWING & CONTROL	For vSpace installations only: Gain access to user sessions or to individual vSpace Servers to provide support or to configure the local vSpace Server settings.
